Descriptive Analytics of Samsung Electronics: Sales Performance and Customer Insights.

Tracking Sales Trends, Best-Selling Products, Category Performance, Customer Ratings & Regional Demand.

Note: Samsung's live sales and customer transaction data is not publicly accessible. Therefore, this report uses a synthetic dataset created to simulate realistic business operations over a **30-day period**. The dataset covers **10 Samsung products**, grouped into **9 product categories**, and distributed across **5 geographical regions**. It includes **daily units sold, product prices, revenue, customer ratings, product categories, and regional sales information.** The analysis uses descriptive metrics such as **total units sold, total revenue, average daily sales, product/category sales, revenue contribution, average customer rating, and regional sales performance** to evaluate Samsung's simulated business performance.

---

1. Objective

The primary objective of this descriptive analytics project is to analyse the **sales performance of Samsung** using a synthetic dataset representing 30 days of business transactions.

The report focuses on answering the following business questions:

1. How did **Samsung's daily sales performance** change over the **30-day period**?
2. Which Samsung **products contributed the most** to overall sales and revenue?
3. Which Samsung product **categories performed the best**?
4. How **satisfied were customers** with Samsung products?
5. How did **sales vary across different regions**?

---

2. How This Would Work at Real Scale

Stage	Description	Example Technologies
Data Generation	Create a synthetic Samsung Electronics dataset for analysis	ChatGPT
Data Storage	Store sales, customer, and product information securely for future analysis.	Microsoft Excel

Data Processing	Clean, transform, and aggregate data to calculate business metrics and KPIs.	Python (Pandas)
Data Visualization	Present analytical insights using charts, dashboards, and reports.	Google Colab
Report Preparations	Interpret results, prepare insights, and format the final analytics report	Microsoft Word, ChatGPT

3. Tracking Sales Trends

Over the simulated **30-day** period, Samsung Electronics recorded **approximately 25.8 thousand units sold**, generating nearly **$27.8 million in total revenue.** The sales trend remained relatively stable throughout the observation period, with moderate day-to-day fluctuations reflecting normal variations in customer purchasing activity. **Peak sales were recorded on 14 June 2026, while the lowest sales volume** occurred **on 22 June 2026.** Overall, the trend indicates consistent market demand across Samsung's product portfolio, with gradual changes in daily sales rather than extreme volatility.

KPIs:

Total Units Sold: 25,794 Units

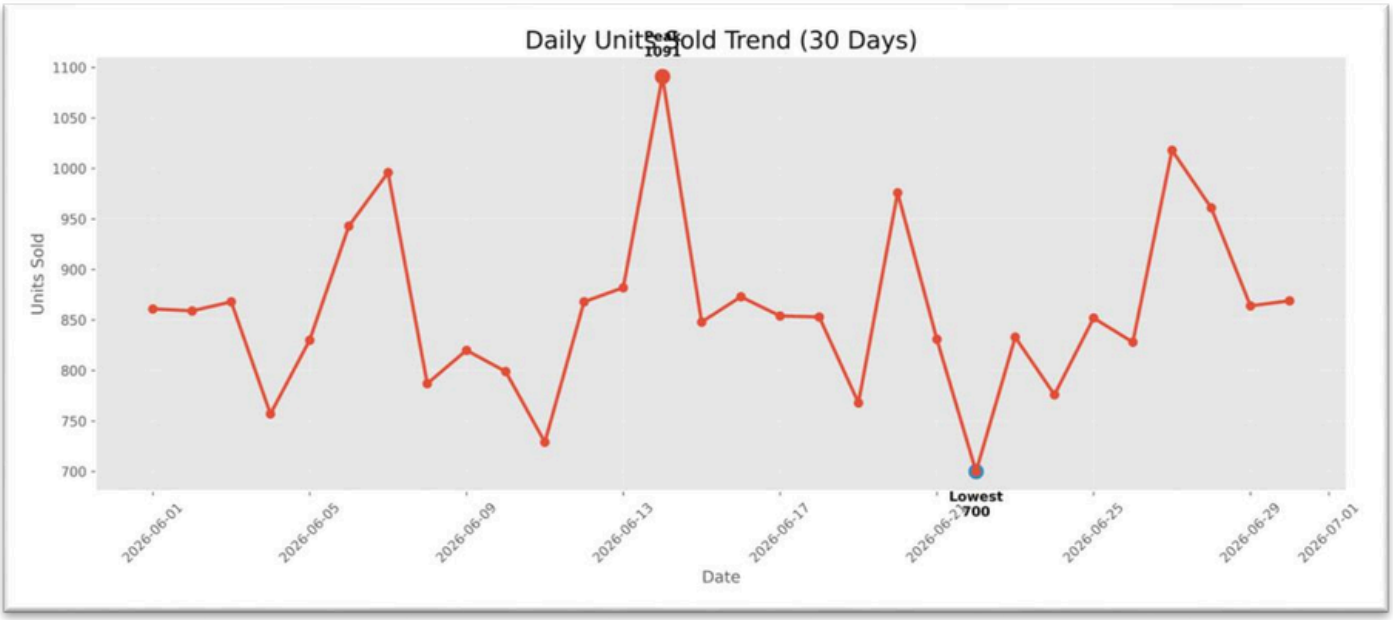

Total Revenue: $27.88 Million

Average Daily Units Sold: 860 Units

Highest Sales Day: 14 June 2026 (1,091 units)

Lowest Sales Day: 22 June 2026 (700 units)

Fig 1. (Daily Units Sales)

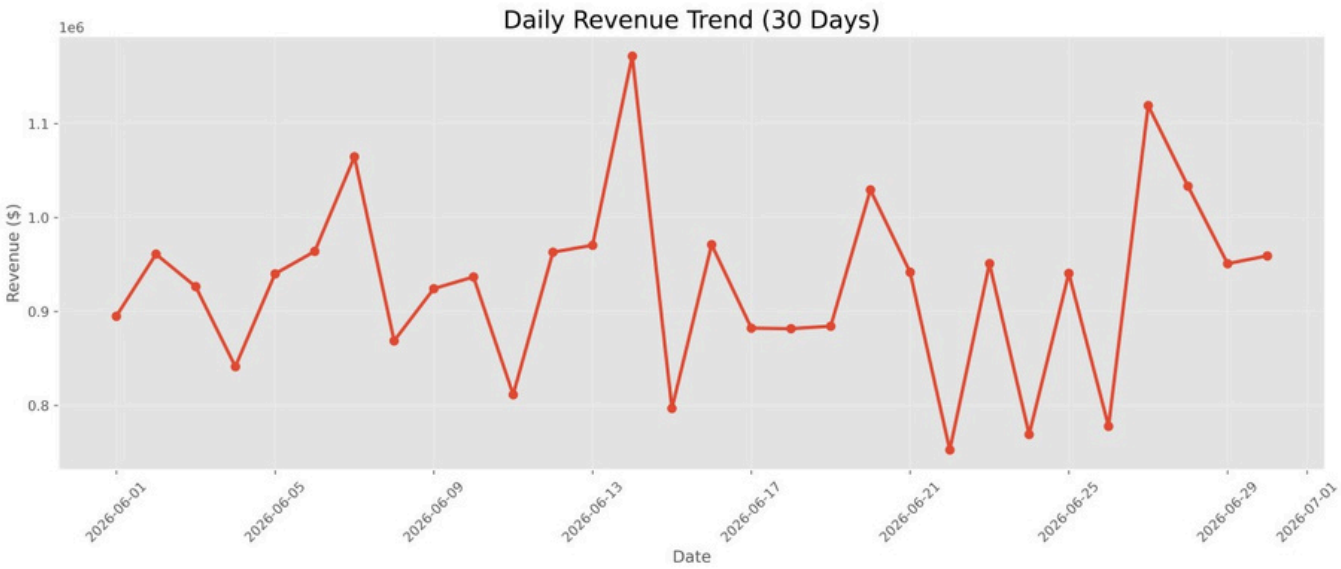

Observation

The daily units sold remained relatively stable throughout the 30-day period, with noticeable day-to-day fluctuations. The highest sales were recorded on 14 June 2026 with 1,091 units, while the lowest sales occurred on 22 June 2026 with 700 units. Most days remained within the approximate range of 750–1,000 units.

Business Insight

The relatively stable sales pattern indicates consistent customer demand for Samsung products during the observation period. The identified peak and low-sales days can help Samsung investigate factors such as promotions, product availability, or customer purchasing patterns that may influence daily sales.

Fig 2. (Daily Revenue Trend)

Observation

Daily revenue fluctuated throughout the 30-day period, following a broadly similar pattern to the daily sales trend. Several revenue peaks and declines can be observed, indicating variations in the value of products sold on different days. The highest revenue point occurs around the middle of the observation period, while lower revenue levels appear on several other days.

Business Insight

Revenue fluctuations indicate that sales volume alone does not determine daily financial performance. Changes in the mix of products sold, particularly the contribution of higher-priced products, can significantly influence Samsung's daily revenue.

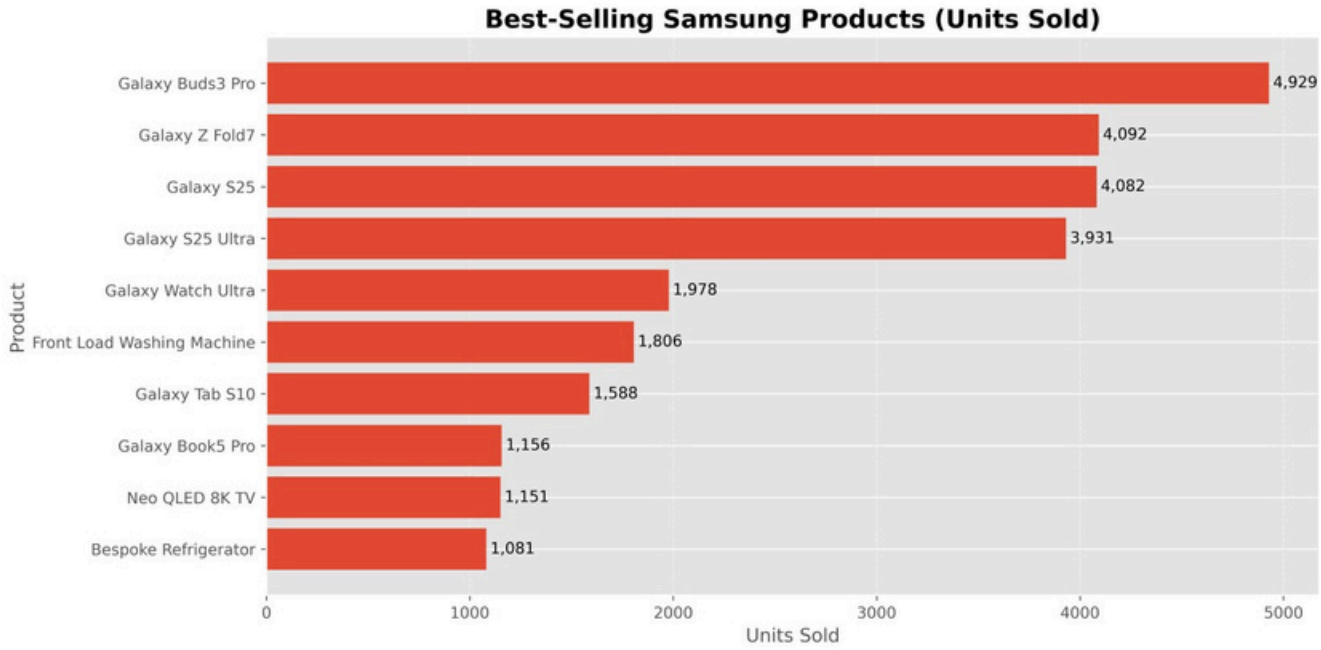

4. Best-Selling Products

Over the simulated **30-day** period, Samsung Electronics **recorded sales across 10 major products,** with **Galaxy Buds3 Pro emerging as the best-selling product** by units sold, contributing approximately **4,929 units.** In terms of **revenue, Galaxy Z Fold7 generated the highest sales** value at approximately **$7.85 million**, reflecting the significant contribution of Samsung's premium product segment despite comparatively lower sales volumes.

KPIs:

- **Best-Selling Product:** Galaxy Buds3 Pro (**4,929 units sold**)
- **Highest Revenue Product:** Galaxy Z Fold7 (**$7.85 million**)
- **Average Units Sold per Product: 2,579 units**
- **Products Analysed: 10**

Fig 3. (Best Selling Product)

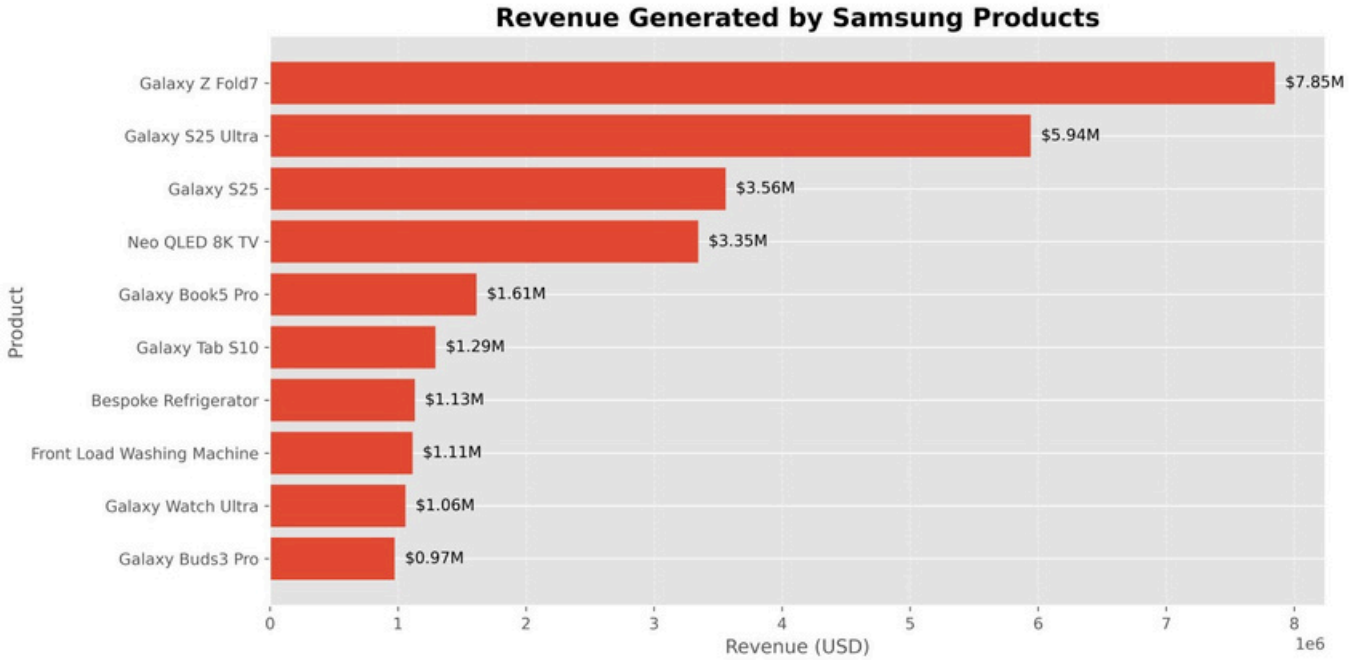

Observation

Galaxy Buds3 Pro recorded the highest sales volume with 4,929 units, followed by Galaxy Z Fold7 with 4,092 units and Galaxy S25 with 4,082 units. Galaxy S25 Ultra also recorded relatively strong demand at 3,931 units, while the remaining products recorded considerably lower sales volumes.

Business Insight

The strong performance of GalaxyBuds3 Pro indicates significant customer demand for Samsung's wireless audio products. At the same time, the high unit sales of Galaxy Z Fold7 and the Galaxy S25 series demonstrate strong demand for Samsung's smartphone portfolio. Samsung could use these high-performing products as key products for promotions and inventory planning.

Fig 4. (Revenue By Product)

Observation

Galaxy Z Fold 7 generated the highest product revenue at approximately **$7.85 million**, followed by Galaxy S25 Ultra at approximately **$5.94 million**. Galaxy S25 generated approximately **$3.56 million**, while Galaxy Buds3 Pro generated approximately **$0.97 million** despite being the best-selling product by units.

Business Insight

The comparison demonstrates that the product with the highest sales volume does not necessarily generate the highest revenue. Galaxy Z Fold7's strong revenue contribution highlights the importance of premium-priced products in Samsung's overall financial performance.

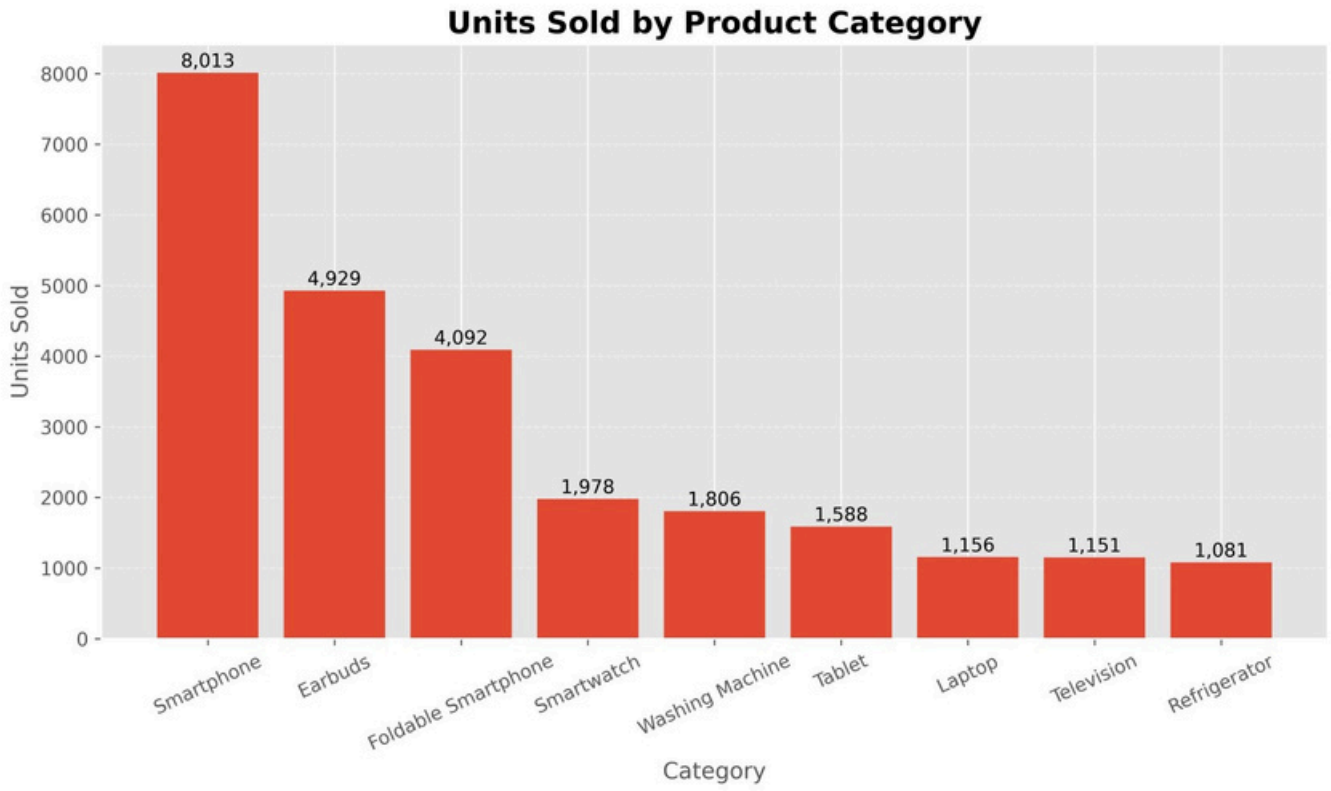

5. Category Performance

Over the simulated **30-day** period, Samsung Electronics **recorded sales across 9 product categories,** with **Smartphones** emerging as the **strongest-performing** category, contributing **8,013 units sold** and generating approximately **$9.50 million in revenue.** The **Earbuds** category recorded the **second-highest sales volume (4,929 units),** while **Foldable Smartphones generated the second-highest revenue ($7.85 million)** due to their premium pricing. Overall, the category-wise analysis highlights that Samsung's **mobile product ecosystem remained the primary driver of sales performance**, supported by strong contributions from premium devices and consumer electronics.

KPIs:

- **Highest Performing Category:** Smartphone (**8,013 Units Sold**)
- **Highest Revenue Category:** Smartphone (**$9.50 Million**)
- **Second Highest Sales Category:** Earbuds (**4,929 Units Sold**)
- **Second Highest Revenue Category:** Foldable Smartphone (**$7.85 Million**)
- **Total Categories Analysed: 9 Categories**

Fig 5. (Units Sales As Per Product Category)

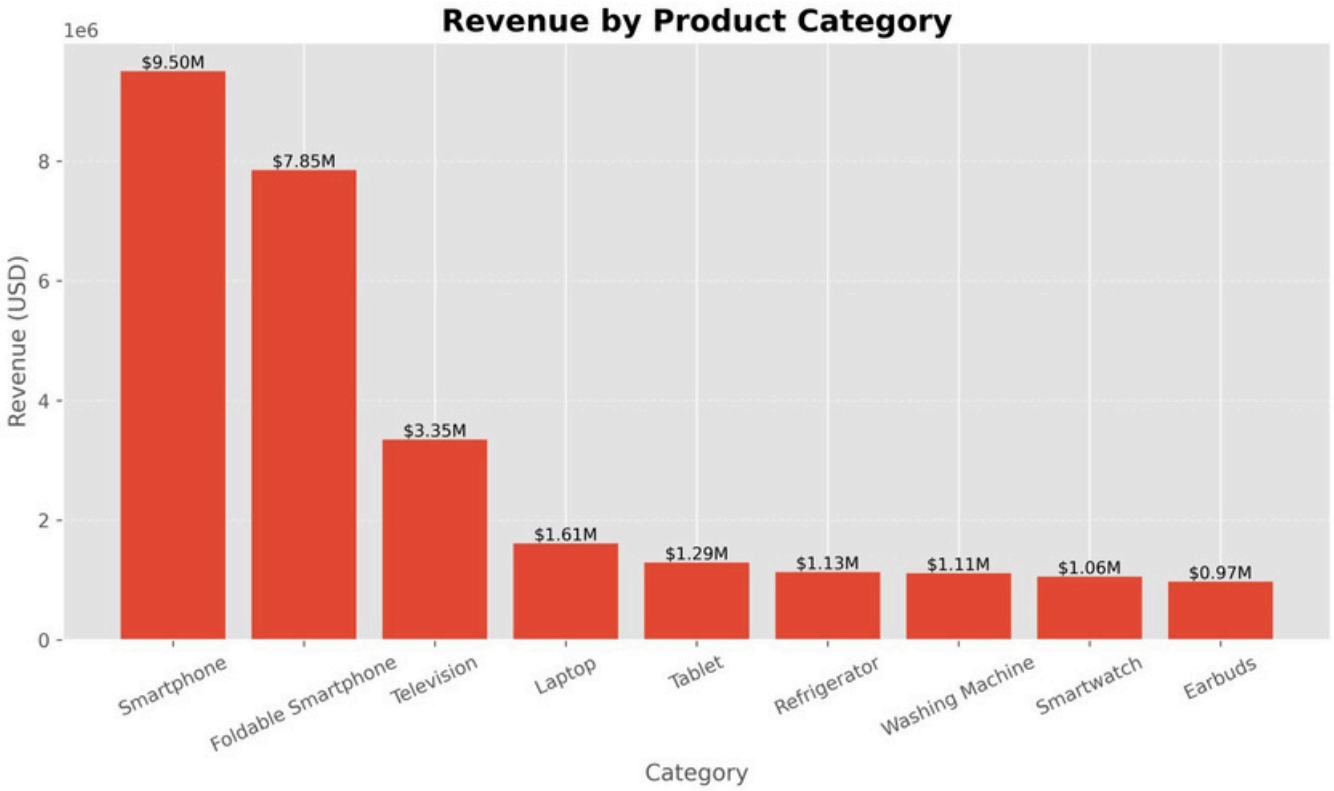

Observation

The Smartphone category recorded the highest sales volume with 8,013 units, followed by Earbuds with 4,929 units and Foldable Smartphones with 4,092 units. The remaining categories recorded substantially lower sales volumes, with Refrigerator recording the lowest at 1,081 units.

Business Insight

Smartphones are the strongest source of sales volume in the simulated product portfolio. The strong performance of Earbuds and Foldable Smartphones also indicates that Samsung's mobile ecosystem contributes significantly to overall customer demand. Inventory and marketing efforts can therefore prioritize these high-volume categories.

Fig 6. (Revenue By Product Category)

Observation

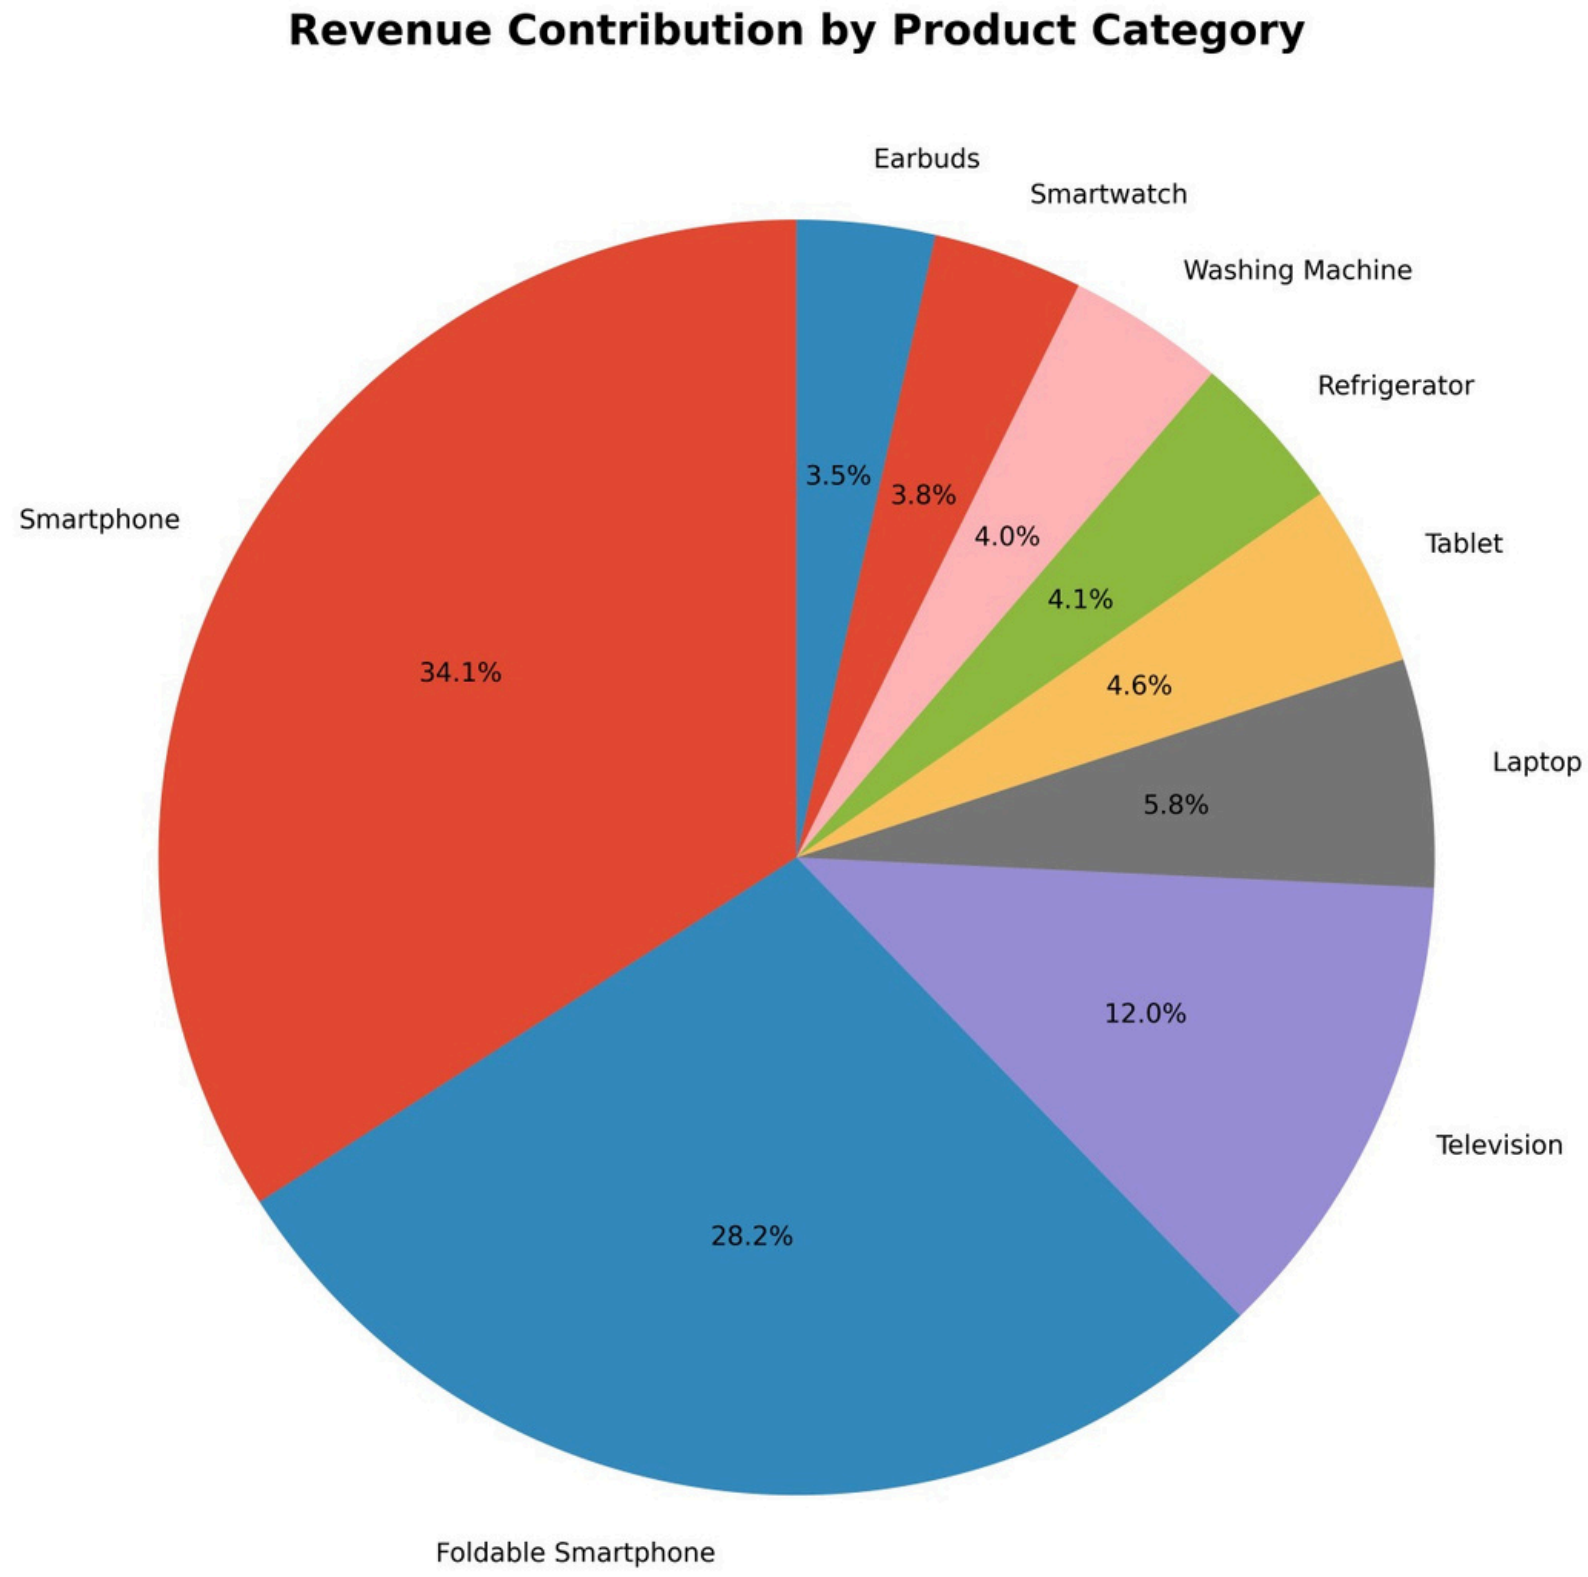

Smartphone generated the highest category revenue at approximately $9.50 million, followed by Foldable Smartphone at $7.85 million. Television contributed approximately $3.35 million, while the remaining categories each generated less than approximately $1.61 million. Earbuds generated the lowest category revenue at approximately $0.97 million.

Business Insight

The revenue distribution shows that smartphones and premium foldable smartphones are the major financial contributors within the simulated portfolio. This indicates that premium mobile

products play an important role in generating revenue even when their unit sales are not always the highest.

Fig 7. (Category Revenue Share)

Revenue Contribution by Product Category
Earbuds

3.8%
4.0%
4.1%
4.6%
5.8%
12.0%
28.2%
34.1%

Observation

Smartphones contributed the largest share of total category revenue at **34.1%**, followed by Foldable Smartphones at **28.2%**. Television contributed **12.0%**, while the remaining categories each contributed less than 6% of total revenue. Earbuds represented the smallest share at **3.5%**.

Business Insight

The revenue-share distribution shows that Samsung's revenue in this simulated dataset is concentrated mainly in the smartphone and foldable smartphone categories. This concentration highlights the importance of mobile products to overall revenue and also suggests an opportunity to strengthen other categories to achieve a more balanced revenue portfolio.

6. Customer Ratings

Over the simulated **30-day** period, Samsung Electronics maintained a **strong level of customer satisfaction**, with an **average customer rating of 4.38 out of 5.00** across all products. **Galaxy Book5 Pro received the highest average customer rating of 4.50,** indicating excellent customer satisfaction, while **Galaxy S25 recorded the lowest average rating of 4.24.** Despite slight differences in product ratings, **all Samsung products achieved ratings above 4.20, reflecting consistently positive customer feedback** and a high level of product quality across the portfolio

---

KPIs:

- **Average Customer Rating: 4.38 out of 5.00**
- **Highest Rated Product: Galaxy Book5 Pro (4.50)**
- **Lowest Rated Product: Galaxy S25 (4.24)**
- **Products Analysed: 10**

Fig 8. (Customer Rating Distribution)

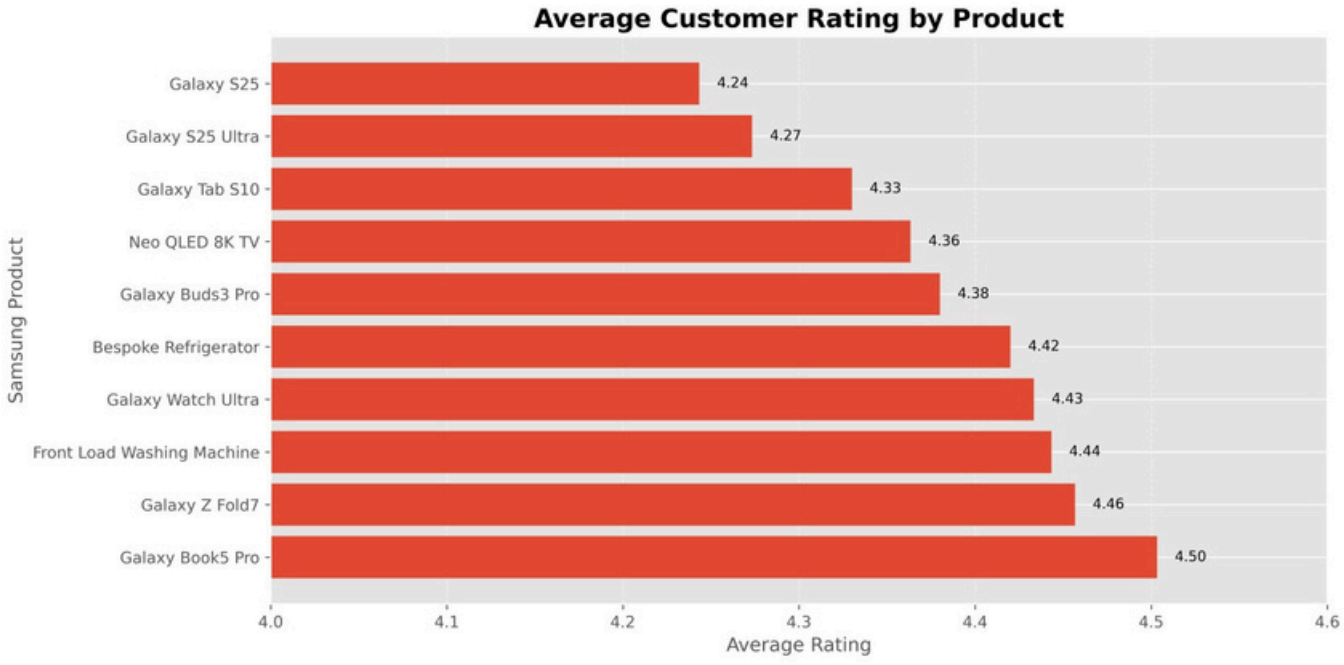

Observation

Customer ratings are concentrated in the higher range, with most observations appearing between approximately 4.0 and 4.9. The distribution contains relatively few ratings below 4.0, while a substantial number of ratings are concentrated around the 4.1–4.3 and 4.7–4.9 ranges.

Business Insight

The concentration of ratings in the higher range indicates generally positive customer feedback across the simulated Samsung product portfolio. Maintaining this level of customer satisfaction can support customer loyalty, while products receiving comparatively lower ratings can be examined to identify areas for improvement.

Fig 9. (Average Product Rating)

Observation

Galaxy Book5 Pro received the highest average rating of 4.50, followed by Galaxy Z Fold7 at 4.46 and Front Load Washing Machine at 4.44. Galaxy S25 recorded the lowest average rating at 4.24, while all 10 products maintained average ratings above 4.20.

Business Insight

The consistently high ratings indicate strong overall customer satisfaction across Samsung's product portfolio. Galaxy Book5 Pro's leading rating suggests particularly positive customer perception, while the relatively lower rating of Galaxy S25 provides an opportunity to investigate customer feedback and identify potential product improvements.

7. Regional Demand

Over the simulated **30-day** period, Samsung Electronics recorded sales across five geographical regions, with the **North region achieving the highest sales volume of 5,671 units sold.** However, the **East region generated the highest revenue, contributing approximately $6.01 million,** indicating stronger demand for premium Samsung products in that market. On **average, each region sold approximately 5,159 units and generated nearly $5.58 million in revenue.**

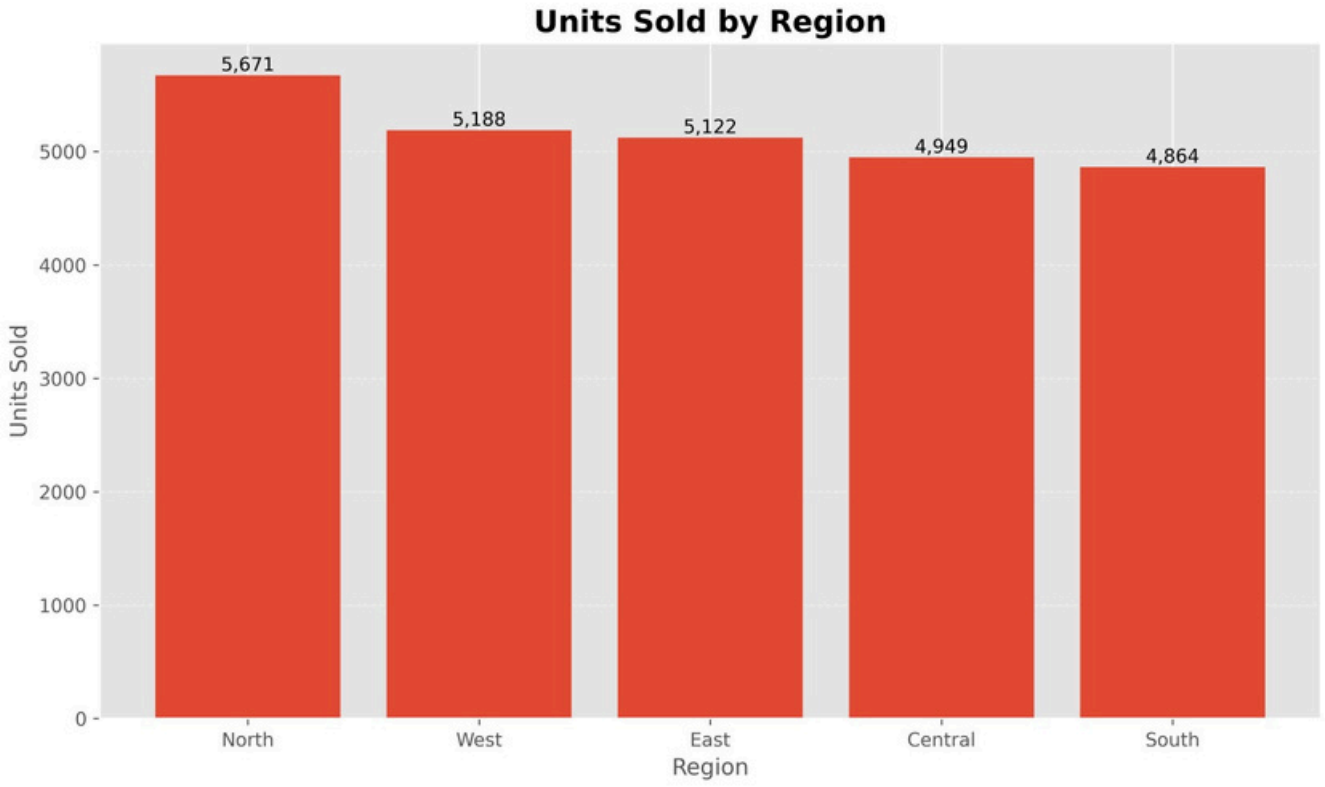

The regional analysis highlights noticeable differences in customer purchasing patterns and emphasizes the importance of

location-based sales strategies for maximizing business performance.

KPIs:

- **Highest Demand Region: North (5,671 Units Sold) • Highest Revenue Region: East ($6.01 Million)**
- **Regions Analysed: 5 Regions**
- **Average Units Sold per Region: 5,159 Units**
- **Average Revenue per Region: $5.58 Million**

Fig 10. (Regional Units Sold)

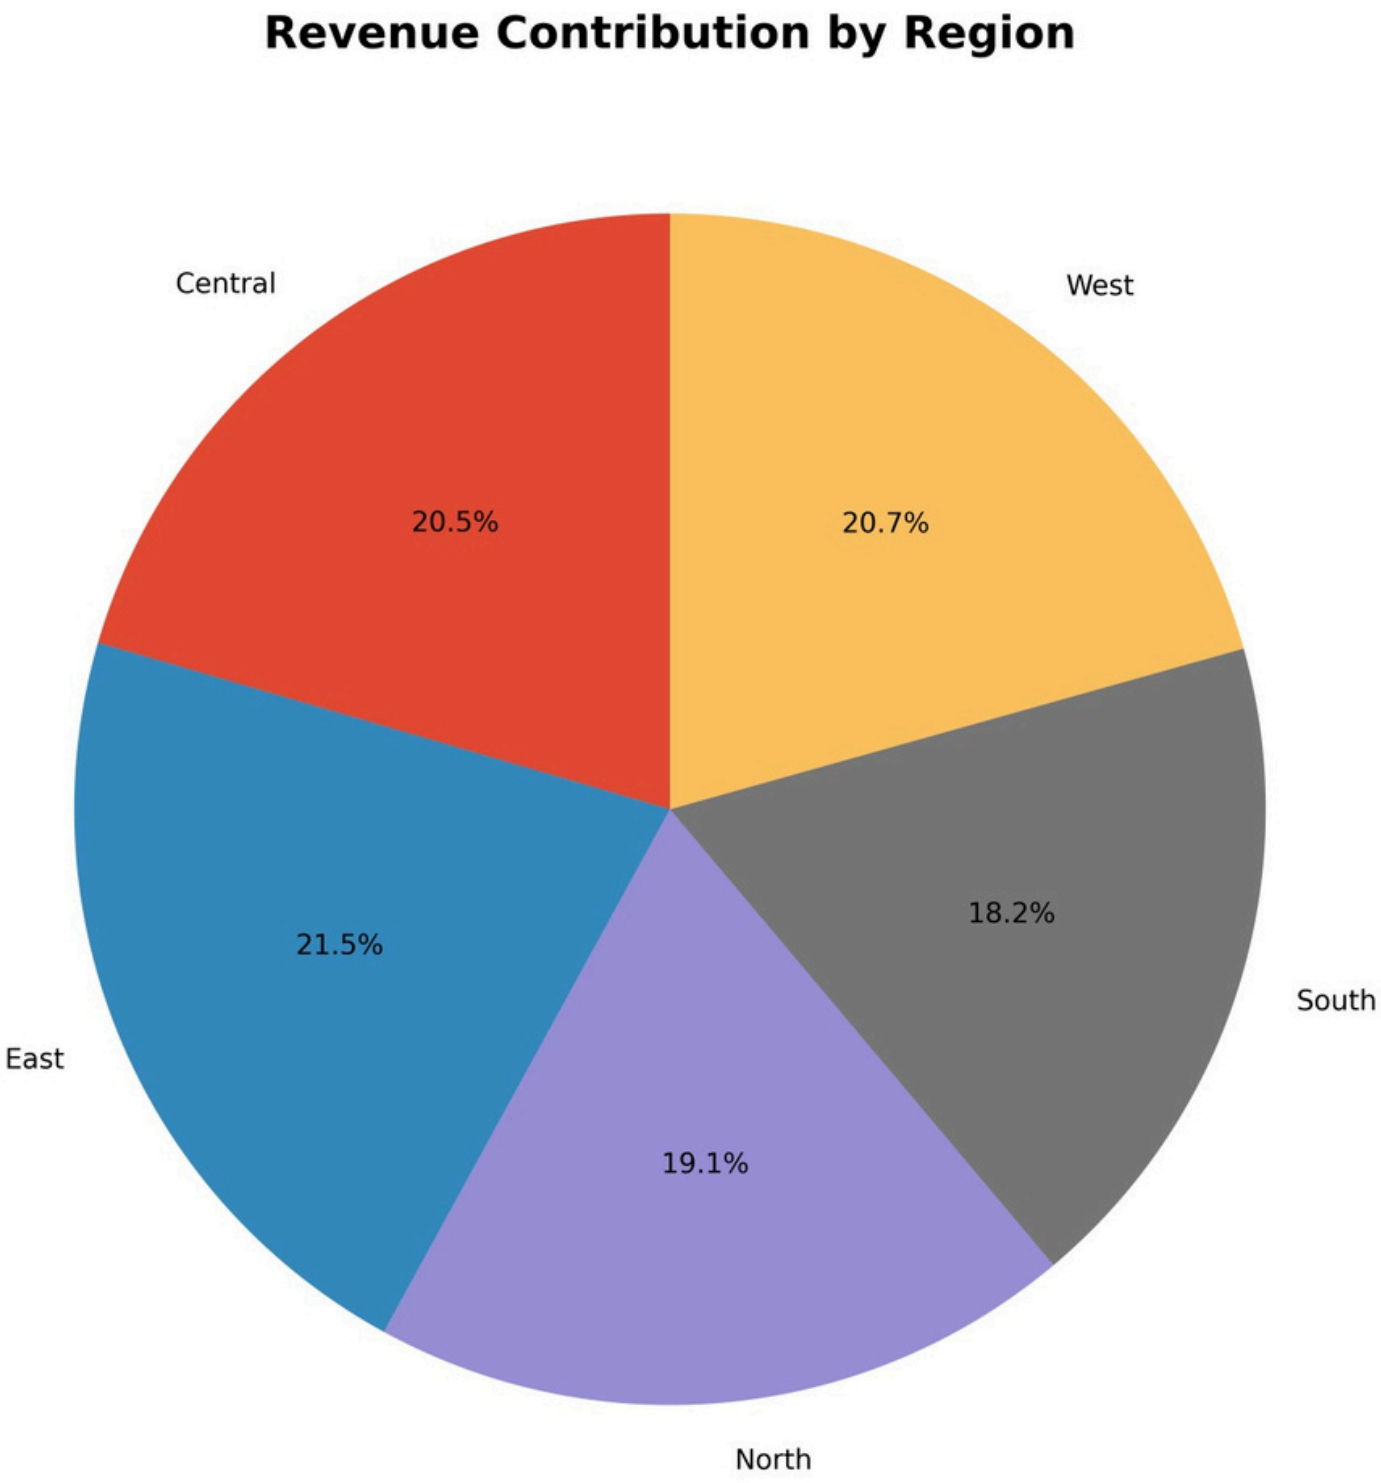

Observation

North recorded the highest sales volume with 5,671 units, followed by West with 5,188 units and East with 5,122 units. Central recorded 4,949 units, while South recorded the lowest sales volume at 4,864 units. The difference between the highest and lowest regions is relatively moderate.

Business Insight

The relatively close sales volumes across the five regions indicate that Samsung has a broadly distributed demand pattern in the simulated dataset. North's higher sales volume suggests an opportunity to examine successful sales or distribution strategies in that region and potentially apply similar approaches elsewhere.

Fig 11. (Revenue Contribution by Region)

Observation

East contributed the largest share of regional revenue at 21.5%, followed by West at 20.7% and Central at 20.5%. North contributed 19.1%, while South recorded the lowest share at 18.2%.

Business Insight

The relatively balanced revenue distribution indicates that Samsung's revenue is not heavily dependent on a single geographical region in this simulated dataset. East's leading revenue contribution, despite North having the highest unit sales, also suggests differences in the value or product mix of purchases across regions.

8. Key Findings

- Samsung Electronics **sold a total of 25,794 units** over the simulated 30-day period, generating approximately **$27.88 million in revenue.**

- Daily sales remained relatively stable, with the **highest sales** recorded on **14 June 2026 (1,091 units)** and the **lowest sales** on **22 June 2026 (700 units)**.

- The **Smartphone category** was the **strongest-performing** segment, contributing **8,013 units sold** and approximately **$9.50 million** in revenue.

- **Galaxy Book5 Pro** received the **highest** average customer rating (**4.50 out of 5.00**), while **Galaxy S25** recorded the **lowest** average rating (**4.24 out of 5.00**). Despite this, all products have maintained ratings above **4.20**, indicating consistently **positive** customer satisfaction.

- The **North** region recorded the **highest sales** volume (**5,671 units**), whereas the **East** region generated the **highest revenue** (**$6.01 million**), suggesting stronger demand for premium products in that market.

Summary of Key Metrics:

Objective	Key Metrics
Sales Trend	• Total Units Sold: **25,794 units** • Total Revenue: **$27.88 million** • Average Daily Units Sold: **860 units** • Highest Sales Day: **14 June 2026 — 1,091 units** • Lowest Sales Day: **22 June 2026 — 700 units**

Product Performance	• Best-Selling Product: **Galaxy Buds3 Pro — 4,929 units** • Highest Revenue Product: **Galaxy Z Fold7 — $7.85 million** • Products Analysed: **10** • Average Units Sold per Product: **2,579 units**
Category Performance	• Highest Performing Category: **Smartphone — 8,013 units** • Highest Revenue Category: **Smartphone — $9.50 million** • Categories Analysed: **9**
Customer Ratings	• Average Customer Rating: **4.38 / 5.00** • Highest Rated Product: **Galaxy Book5 Pro — 4.50** • Lowest Rated Product: **Galaxy S25 — 4.24**
Regional Demand	• Highest Units Sold Region: **North — 5,671 units** • Highest Revenue Region: **East — $6.01 million** • Regions Analysed: **5** • Average Units Sold per Region: **5,159 units** • Average Revenue per Region: **$5.58 million**

9. Next Steps: Moving from Descriptive to Predictive Analytics

1. This descriptive analytics report focused on understanding what happened by analysing Samsung Electronics' **sales performance over a simulated 30-day period.** While the analysis successfully **identified sales trends, best-selling products, category performance, customer satisfaction, and regional demand.**

2. Potential next steps include:

   Sales Forecasting: Develop predictive models to forecast future demand for Samsung products based on historical sales patterns.

   Demand Prediction by Region: Predict regional demand to improve inventory planning and optimize product distribution.

   Customer Rating Prediction: Analyse customer feedback trends to identify products that may experience changes in customer satisfaction.

   Product Recommendation Analysis: Identify relationships between products to support personalized marketing and cross-selling strategies.

Business Intelligence Dashboard: Build an interactive dashboard using Power BI or Tableau for real-time monitoring of sales performance and KPIs.

These advanced analytical approaches would **help Samsung Electronics transition from understanding historical business performance to making accurate, data-driven predictions for future business growth.**
